

North Carolina Flight and Flyers: LIVE!
Use this guide for students to make paper airplanes with 8.5 x 11-inch paper.

Step 1: Make a fold lengthwise.

Step 2: Open; take upper left and right corners and fold toward center to make creases.

Step 3: Take upper right side and fold inward to meet crease. Repeat on left side. Fold in half along crease.

Step 4: Now make a wing! Flip plane over and fold back past bottom crease. Next, make the other wing! Fold other wing back to match first wing.

You made a plane! We'll fly them together toward the end of the LIVE! event.
